

CASE STUDY YACHT

58m Damen SeaXplorer - Pink Shadow

BRIEF

A 58m Explorer Yacht with Audio Video Systems incorporating a robust / flexible user interface, yacht infotainment system, IT Systems, Worldwide Connectivity and CCTV Security, all installed and managed from a single AV/IT Room.

RESPONSE

Working with a single Main Equipment Center for all systems, enabled us to fully assemble, configure, program and test the entire installation prior to shipping to the build site in Turkey.

This was an ambitious project but a well designed production process, coupled with good project management enabled a smooth delivery for this head-turning vessel.

Systems also included:

- ◆ YachtEYE Infotainment System
- ◆ Crestron NVX
- ◆ Q-Sys Audio management and amplification
- ◆ Axis CCTV & Security systems

UNIQUE SOLUTIONS

As an "Explorer" this project includes the YachtEYE infotainment system which brings water, air and weather information, cruising itineraries and real time position data into an imaginative and user friendly display for the guests enjoyment.
