## Private Villa Security Valbonne

### BRIEF

Security system installation for a private villa near Valbonne. The client required a fully upgraded CCTV and Access Control solution that he could monitor whilst absent.

### RESPONSE

Icon Connect supplied a highly capable new IP CCTV system from AXIS.

Cameras are imbedded with "Deep Learning" to enable advanced motion detection through video analytics.

This perimeter defense is integrated with the property intruder alarm system to enable instant escalation of any intruder event to the security responder.

Systems include continuous recording to a Milestone Network Video Recorder (NVR) for remote review of activity with up to 2 weeks recording.

Access control is managed via an RF ID tag and Video intercom system from 2N.

### SUPPORT

The property CCTV systems are monitored remotely by a local security company as well as the client.
