

CASE STUDY

RESIDENCE

Country Estate - Surrey

BRIEF

Design and install a sophisticated AV/IT & security system in a multi dwelling privately owned stately home estate.

The technology was to utilise the latest in biometrics for access control, facial recognition, ANPR, Predator radar tracking with video observation and steerable high intensity flood lighting, controlled gates for vehicle access and video gate entry systems.

A complete control room was to be installed in two separate locations with multi screen viewing and a custom bespoke intruder alarm interface viewed up on the wall monitors.

RESPONSE

Icon Connect supplied a fully integrated bespoke security system with over 100 cameras over the estate and various out buildings used for staff and guests.

A complete fibre network over the entire site was installed with a number of remote outdoor cabinets that housed the fibre hubs, network switches and audio amplifiers.

SUPPORT

The property was delivered in a short timeframe together with monthly "Sentinel" maintenance contract for regular system health checks.

Sentinel Includes:

- ◆ Monthly check of WiFi & TV functionality
- ◆ Software & Firmware updates
- ◆ Visit report for client's Family Office
